**Update for CRA v4.0.0+ and  
React 17+**

Hello everyone!

As of November 7, 2020 the core react team doesn't ship with **PWA** by default anymore, meaning they won't build your **service-worker.js** file in the final build folder! Do not worry, there are just some additional steps you will have to run to convert your react app to be able to perform the next step modifications to be **PWA** compliant!

You only need to do this if you are running react-scripts v.4 or greater or React v17 or greater and you did not create this project using the **cra-template-pwa** when we initialized our project.

Follow the following steps:

1. In a new and separate directory from our current project, generate a new CRA react app with the service worker template:

```
npx create-react-app my-app --template  
cra-template-pwa
```

## Asynchronous Redux: Redux-Saga (7:59)

1h 21m

2. Copy the `service-worker.js` and `serviceWorkerRegistration.js` file from the new created app and add it into our `client/src` directory.

3. Copy the all the "workbox-\*" dependencies from the `package.json` file in the dependencies section and add it into our **client** folders `package.json` dependencies. Then re-install your packages using `yarn` or `npm` depending on whichever package manager you have been using up to this point!

Now you can continue with the remaining videos for progressive web apps!

Happy coding everyone :)
